

Feature

- Programmable output voltage
- Temperature coefficient is 50ppm/ $^{\circ}\text{C}$ typical
- Temperature compensated for operation over full temperature range
- Low output noise voltage
- Fast turn on response
- Pb free

Description

The EL431 series are three-terminal adjustable regulators with guaranteed thermal stability over applicable temperature ranges. The output voltage may be set to any value between V_{REF} (approximately 2.495 volts) and 36 volts with two external resistors. These devices have a typical dynamic output impedance of 0.2Ω . Active output circuitry provides a very sharp turn-on characteristic, making these devices excellent replacement for Zener diodes in many applications.
